# Curriculum activity risk assessment

## **Rugby League**

clever • skilled • creative

## Activity scope

This document relates to student participation in Rugby League as a curriculum activity including the teaching of rugby league skills, team training and competition matches conducted by schools.

Where the rules and procedures of a Rugby League competition impose additional or more stringent safety requirements than are listed below, then those competition rules and procedures take precedence and **must** not be set aside.

## **Risk level**

The actual risk level will vary according to the specific circumstances of the activity and these **must** be considered when assessing the inherent risk level and planning the activity. As a starting point, ask the following questions:

- Which students will be involved?
- What will the students be doing?
- What will the students be using?

- Where will the students be?
- Who will be leading the activity?

## Hazards and suggested control measures

All persons engaging in this activity should:

- identify the hazards, including any additional hazards not mentioned here;
- assess their significance; and
- manage the potential risks.

Listed below are indicative hazards/risks and suggested control measures. They are by no means exhaustive lists. After checking these, add details of any other identified hazards/risks and additional controls you intend to implement.

| Biological<br>material<br>• Body Fluids<br>(e.g. blood,<br>saliva, sweat)                 | Comply with Infection Control<br>Guideline. Students with open<br>cuts and abrasions are to be<br>removed from the activity and<br>treated immediately. If bleeding<br>cannot be controlled<br>completely, the participant<br>should not be allowed to return<br>to the activity. All clothing,<br>equipment and surfaces<br>contaminated by blood should<br>be regarded as potentially<br>infectious. |     |    |  |
